---

We have today released version 9.0.24. This posting lists the changes in this version.

---

### Version 9.0.24, 23/07/2012

---

#### VisualArchive

##### Improvement

Automatically suspend archiving if a DISK COPY Backup Device becomes full. Allow users to replace the disk linked to that backup device or create extra space before resuming archiving.

---

#### VisualDVR

##### Improvement

Display a message if no license is present!

---

##### Bug Fix

In VisualDVR survey data input, remove trailing field separators, and any spaces immediately following field separators.

---

##### Bug Fix

Video clips and still images were not correctly created if the video channels had an Auto-Copy destination. Now images and stills will be copied to the selected drive in the VisualWorksDVRClips folder and also the VisualWorksReportsProjects structure.

---

## **VisualOverlay**

### **Bug Fix**

Allow a received data field to be changed from Integer to Decimal.

---

### **Bug Fix**

Prevent blue screen crash if users move an image off the lower right corner of the screen layout.

---

## **Version 9.0.23, 06/07/2012**

---

## **VisualEdit Professional**

### **Bug Fix**

Realign Pipe script was not correctly handling KP gaps in the source data.
